

## QUIZ

Fill in the code so that "Great job!" would be printed to the terminal.

```
if (TRUE  FALSE){  
    echo "Great job!";  
}
```

You got it!

Choose the correct explanation for the `include` statement in PHP.

`include` allows a global variable to be used within a function.

`include` brings in and evaluates code from one file to another.

Right!

`include` checks if a value is included in an array.

Fill in the code so that "Great job!" would be printed to the terminal.

```
if (TRUE  FALSE){  
    echo "Great job!";  
}
```

You got it!

Fill in the code so that "Great job!" would be printed to the terminal.

```
if (TRUE  TRUE){  
    echo "Great job!";  
}
```

You got it!

Fill in the code so that "Great job!" would be printed to the terminal.

```
if (FALSE  TRUE){  
  echo "Great job!";  
}
```

You got it!

Fill in the code so that "Great job!" would be printed to the terminal.

```
if (  (FALSE  TRUE){  
  echo "Great job!";  
}
```

You got it!

Fill in the code so that "Great job!" would be printed to the terminal.

```
if (TRUE  TRUE){  
  echo "Great job!";  
}
```

You got it!

What will the following code output to the terminal?

```
$first = TRUE;  
$second = FALSE;  
$third = TRUE;  
  
if ($first) {  
  if ($second){  
    echo "Option 1";  
  } else {  
    echo "Option 2";  
  }  
} elseif ($third) {  
  echo "Option 3";  
} else {  
  echo "Option 4";  
}
```

Option 3

Option 4

Option 1

Option 2

That's right!
